L3 ANSWER 14 OF 20 USPATFULL

PI US 5550113 19960827 <--

SUMM . . . or allowing the presence of free glucose for tissue consumption. It is known that certain physiologically defined disease states (e.g., **diabetes** mellitus (sustained hyperglycemia) and reactive or insulinoma induced hypoglycemia) are associated with specific and characteristic alterations in mood. Premenstrual syndrome.

SUMM . . . one embodiment, the present invention discloses compositions comprising inulin and one or more metal complexes, including (but not limited to) **vanadium**, chromium, and manganese complexes. In another embodiment, the compositions of this invention further comprise one or more medium chain triglycerides.

DETD . . . of the present invention are effective in regulating blood sugar levels at significantly lower dosages by virtue of the apparent **synergistic** effect of the other non-inulin composition components (e.g., the metal complexes). In the practice of the present invention, the dosage. . .

DETD . . . metal complexes, in conjunction with inulin, effect blood sugar regulation. Suitable metal complexes include metal complexes of chromium, manganese, and **vanadium**. As used herein, the term "complex" refers to any organic or inorganic ligated metal species.

DETD . . . e.g., Schroeder, The Trace Elements and Man, Devin-Adair, pub., Old Greenwich, Conn., 1977), and may explain, in part, maturity onset **diabetes** and its prevalence in humans after the age of 50.

DETD **Vanadium** also effects blood sugar regulation and has recently

been classified as an essential trace mineral. **Vanadium** complexes have been used in therapeutic applications including the treatment of **diabetes**. **Vanadium** is poorly absorbed and dietary intake ranges from about 2 to 15 mg per day. Because **vanadium** is poorly absorbed and its numerous complexes are extremely toxic, few **vanadium** complexes have been demonstrated to possess biological activity.

DETD Like the chromium complexes, the **vanadium** complexes include organic and inorganic **vanadium** complexes such as **vanadium** carbonyl, **vanadium** pentoxide, **vanadium** trisulfate, vanadyl dichloride, and vanadyl trichloride. Various organic **vanadium** complexes may also be used in the composition of the present invention. Examples of organic **vanadium** complexes include vanadyl glycinate, vanadyl gluconate, and vanadyl citrate. In a preferred embodiment, the **vanadium** complex is vanadyl sulfate (VSO.sub.5).

DETD . . . present invention to stabilize blood sugar levels upon glucose challenge, Formulation A was administered to four individuals with insulin dependent **diabetes** mellitus and two individuals with definitive reactive hypoglycemia. The individuals with reactive hypoglycemia developed blood sugar levels of 40 and. . .

DETD Formulation A was administered to the individuals with **diabetes** mellitus (5 capsules, 3 times daily for one month). In all cases, the insulin requirements as determined by blood sugar. . .

DETD . . . Gilles de la Tourette syndrome

	34	22
Seven	Depression, premenstrual syndrome	
	21	9
Eight	Anxiety, reactive hypoglycemia	
	24	8
Nine	Depression, adult onset diabetes	
	19	10
	mellitus*	
Ten	Depression, facial tics	
	26	14

*This patient was able to discontinue his oral hypoglycemic agent three weeks. . .

CLM What is claimed is:

. . . inulin, a metal complex, and a pharmaceutically acceptable carrier therefor wherein the metal of the metal complex is selected from **vanadium**, chromium and manganese.

. . . inulin, a metal complex, and a pharmaceutically acceptable carrier therefor wherein the metal of the metal complex is selected from **vanadium**, chromium and manganese.
